DETAILED ACTION

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Royal W. Craig on 01/08/2009 and 01/13/2009.

The application has been amended as follows:

Specification: maintain originally filed specification made in 04/12/2004 and delete amendments to the specification made in 01/05/2009 and 01/07/2009

AMENDMENTS TO THE SPECIFICATION:

Page 3, column 2, paragraph [0040], please delete in its entirety and replace with the following:

—In FIG. 4 illustrating a timing diagram for an operation procedure according to a preferred embodiment of the present invention, there is illustrated a state of the call acceptance for eight slaves as an embodiment. At this time, according to the number of slaves calculated for a pre-scheduling duration (T_{p_s}), the master determines a sequence of services (S150), and thus allocates, to the slave that intends to enter the sniff mode, a Sniff Interval Time (SIT) represented by the number of the slot and the Active Member Addresses (AM_ADDR) (001-111) that is used for the slave to communicate with the master after being woken-up ~~[[after waking of the slave]]~~ at the sniff interval time (SIT) (S160).—

Page 4, column 1, paragraph [0047], please delete in its entirety and replace with the following:

—In the above cases, the active member address 001 is jointly allocated to the slave 1, slave 8 and slave 7~~[[, and the active member address 001 and sniff interval times (SIT) are given from the Master to the slaves 7, 8]]~~. Accordingly, the slave 1 is first under data service, and the remaining slave 8 and slave 7 enter the sleep state through the sniff mode (S170). At this time, after the slave 8 and the slave 7 are woken up after the sniff interval times (SIT) different from each other, they use the active member address (001) so as to communicate with the master. That is, the slave 8 and slave 7 are woken up after the sniff interval time (SIT) following the time when the service of the slave 1 is finished such that they can receive the poll packet of the master so as to communicate with the master (S180). Next, the slave 7 checks whether data to be communicated remains and as a result, in a case where it is determined that all data are communicated, the active member address is returned to the master (S190)(S200).—

2. The following is an examiner's statement of reasons for allowance:

No prior art is found on a pre-scheduling unit using the specific equation as claimed by applicants to determine sniff interval time.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ZHIYU LU whose telephone number is (571)272-2837. The examiner can normally be reached on Weekdays: 9AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duc Nguyen can be reached on (571) 272-7503. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
